

Offer Corporate participation, firm participation

Auxiliary Aggregation Automobile

I offer a maximum 50% Stake in my Company.

The Company has so far damaged itself with the Development of a Utility Unit for Commercial Vehicles. The Unit consists of some Purchase parts and specially designed and ready-to-manufacture Aluminium Parts (Turning, Milling, Possibly also Casting).

The Aggregate is a significant Improvement in aggregates already on the Market. That's why all potential Customers are immediately aware of the Benefits. Customers come from the Automotive Suppliers. Samples have already been partially delivered to Customers.

Production must begin in Mid--and for this the first time the Funds are missing and on the other hand the appropriate Partner (Metalworking). That's why I'm looking for a Partner here on this Path.

Ideally a qualified Metal Processor, but also a pure Equity Investment, would be conceivable.

Participation

Region 61, Germany

Entry in own name
