Cleaning of used activated carbon

Cleaning of used activated carbon

The set up and operation of a plant in which used activated carbon shall be cleaned requires capital in the amount of 6.7 million Euro. The complete investment sum is 8.7 million, whereas the rest is equity-equivalent capital.

Used activated carbon, which occur as waste out of biogas, sewage gas or landfill gas plants, has to be eliminated right now. A new treatment makes it possible to clean those used activated carbon completely in a way that this activated carbon can be use for the same or other applications.

The following documents are available:

- contracts for buying the cleaned activated carbon
- detailed businessplan (in German)
- detailed financial planning including list of all expected costs

Only serious and concrete replies are accepted. Inquiries from advisors / consultants without own mandat will not be answered to.
