Thermal wood treatment

The company uses a method for thermal wood finishing, making wood resistant to temperature and humidity fluctuations. This allows

- stable construction of wooden products such as terraces, windows, Swimming Pool casing
- resistance to decay
- long durability
- optical finishing into cheaper varieties of tropical appearance or antique woods and natural finishes
- Low moisture absorption
- reduced thermal conductivity
- low resin content

It uses two different locations, one 8,033 sqm ground - 1,400 sqm building,
in addition, 32,131 sqm ground - 5,202 sqm building

together 37,333 sqm ground - 9,433 sqm building.

Each site can also be purchased separately from the other, asking price € 0.6 and 3.5 million.

The company also has extensive and little-used machines and equipment in very good condition

- Wood ing equipment
- Large 60 m³ thermal chamber
- steam heating facilities
- humidity condensing facility
- Automatic stackers
- saws
- forklift and side forklift
- Planing and milling equipment

The enterprise is currently inactive, the machinery is kept in working condition.

No commission, directly from the owner, only confirmation of first contact and declaration of confidentiality required
