CAD-CAM-ERP solution for wood processing

our company has been developing CAD-CAM and industry software solutions for the craft and interior design sectors for over 20 years.

Currently we have developed a multilingual online ERP solution as well as a furniture planning software, which is new on the market in this form.

This software was developed by a third party company and is in a good beta stage. For cost reasons, we are now looking for partners to complete or further develop the project. Both tools were designed to be multilingual, currently in German and English.
