Metal processing, metal finishing

For a successful powder coater, we are looking for a buyer as part of an age succession. The company is known in the region for high quality and short delivery times, although it is equipped with a good order backlog.

The pre-treatment is carried out by an environmentally friendly process and larger workpieces can also be painted. From individual parts to series production, all batch sizes are offered. The product portfolio is rounded off by services such as hot-dip galvanizing, sandblasting, paint stripping and de-zincing, some of which are purchased from cooperation partners, but offered from a single source.

The company employs 10 people and currently still produces in one shift. The production hall is rented by the shareholder and can also be purchased. The company is conveniently located near the motorway and has a sphere of activity of around 200 km.
