

Offer Corporate participation, firm participation

Project development

With our innovative new construction project, we create space for craftsmanship on 4 floors, which are reserved exclusively for the production and processing of a wide variety of crafts. The aim of the development is to create a network for craftsmen that promotes synergies in the manufacturing process of their high-quality products. The size of the craft areas can range from 130 m² to 850 m². A planned co-workshop has work areas that can be rented for a short time. The respective floor is reached by a heavy-duty elevator for vans or small trucks.

For this real estate investment, we are looking for investors who would like to participate in the company and are focused on long-term value creation. The gross yield is approximately 5.8% per annum.
