

The big business marketplace

Business for sale more than 15 years

ID 26265

Look for Corporate participation, firm participation

Photovoltaics

We want to create solar fences, i.e. fences with solar modules that supply green electricity like rooftop systems. The advantage here is the almost unlimited possibility of space and the very low production costs for customers. Amortization periods of less than 5 years are normal here. We offer a visually very extensive range and are technically able to build on slopes and to make the modules variable in length. The market opportunities are enormous. If you are interested, please feel free to do more, but please only serious inquiries.
