AI Governance and Compliance Consulting

A silent partnership is offered in a consulting business focused on AI governance and regulatory compliance. The core activities include advising small and medium-sized enterprises as well as public and non-profit organizations on the legally compliant implementation, use, and governance of artificial intelligence systems.

The focus lies on the implementation of regulatory requirements, the establishment of governance frameworks, risk and liability prevention, and the development of scalable consulting and assessment models. Market demand is driven by current and upcoming regulatory obligations requiring organizations to address the use of AI systems in a structured and compliant manner.

The silent investment is intended to support the further scaling of services, the expansion of standardized audit and consulting formats, and market development. The participation does not involve management influence or external liability. Compensation for silent partners is performance-based and linked to the company's economic results.
