Offer Corporate sales, firm sales, sales

Telematics/ Vehicle Tracking/ Personal Tracking/ Anti-Theft Protection

GmbH (2) has developed a very good and absolutely competitive system for securing mobile objects. Alarm on mobile phone or PC, when the vehicle is moved, representation of location on map on PC, soon mobile phone. Technically mature and tested. Initial sales successes, but we are too weak to create the marketing and further development alone to the required extent. We need capital and active support and are prepared to give up shares, including majority.

We buy hardware, we have very good own software, we are system integrator.

More information in our homepage, URL on request.
