Look for Corporate co-operation, firm cooperation
Internet Mac Osx Services and more

Hello, I am looking for a business partner in the field of IT/Internet, preferably someone with a techn backround. I run a target-group-oriented service portal and now i want to expand it with new interesting services and ideas. Many advances in technical and marketing/sales are made by me. Own servers and excellent computing center connections are also available.   My rough requirement profile to a business partner: You should be resilient and a problem solver and have a strong affinity for the Internet and the new media, be open to new things and be enthusiastic. You've heard of Web2.0 ;-) ipod TV, video streaming, e-learning, collaboration, design, Web2.0, personal hosting, social services and much more could interest you in the application and implementation. See the human/user/user as our measure in the implementation.

Co-operation
Region , Germany
Entry
