## **Special Deep-construction company for Micro-tunnelling**

The Company has specialized in laying Channels underground using Gyro Compass technology via laser and Computer control since 1987.

With the Machines and Equipment on offer, Kanäle/tubes in Diameter of 150mm to 1600mm Can be laid accurately and also in Arches by electrohydraulic Propulsion at any Depth.

The Main Field Of use of this Technique is wherever:

& #61656; Buildings, Roads, Highways, Track Systems, rivers, Canals, etc., & #61656; in tightly built inner city or Industrial Areas, & #61656; when Pipe is Laid at great depths, & #61656; in the case of problematic earth Lodge (E.g. Hazardous Waste, etc.) or & #61656; in difficult Soils (for example, "flowing" soils)

In such problematic Construction Projects, the Excavation of open Construction Pits is often not possible or associated with very high Costs.
